

Moukhammad Arsammerzouev

Fullstack Software Engineer · Co-founder of Selvio

github.com/mk-techi | moukhammad.arsammerzouev@gmail.com | x.com/mktech0181 | France · Available remote

19-year-old fullstack developer who ships complete web products end to end — from authentication and payments to acquisition and SEO — and takes them all the way to real users. I work best at the intersection of product and growth, where clean Next.js / Nuxt / TypeScript code meets a measurable acquisition strategy. Track record: two products live in production, **1.3M+ users reached**, **30,000+ pages ranked**, an open-source developer tool, and a SaaS in early access.

EXPERIENCE

Co-founder & Software Engineer — Selvio

2026 – Present

Programmatic SEO infrastructure (SaaS) · product, growth & front-end lead

- Co-founded a SaaS that lets any company own the "[You] vs [competitor]" **search results**: it scrapes competitors, generates and deploys hundreds of SEO-optimized comparison pages directly on the client's domain, and monitors them in a closed loop.
- Built the automated pipeline end to end: competitor scraping (features, pricing), page generation with **JSON-LD schema**, **internal linking and sitemaps**, and one-click deployment compatible with Next.js, WordPress and Shopify.
- Integrated the **Google Search Console API** for real-time indexation, ranking and click tracking per page, plus data-driven suggestions for new pages and auto-updates when competitors change.
- Validated the model manually first: **30,000+ pages ranked** across two projects (up to 250K impressions/month) before turning the workflow into a product usable within 48 hours.

Product Developer — Independent SaaS projects

2024 – Present

DiscordGate & Productivity Hub · two-person team, full-stack across the whole product

- Owned the full product lifecycle on two live, monetized products: design, development, self-hosted deployment, acquisition and SEO — not demos, real products with paying users.
- Handled the hard parts end to end: authentication (OAuth2), **Stripe payments**, multi-platform delivery (web, desktop, native Android), and production infrastructure (Docker, VPS, CI/CD).
- Built autonomous growth systems, including a multi-model SEO content pipeline with a Google Search Console feedback loop that improves published content without manual work.

SELECTED PROJECTS

mcp-seo-audit

Open source

An MCP server that gives any AI assistant on-page SEO superpowers: audit a URL's metas, JSON-LD schema, robots.txt, sitemaps and broken links. Returns structured data and leaves interpretation to the client — zero API keys, five composable tools.

Stack: TypeScript, Model Context Protocol SDK, cheerio, Node.js

DiscordGate

In production · v2.0

Discord server directory & AI tools hub. **1,500+ servers indexed**, **12,400+ registered members**, **1.3M+ cumulative members reached**. Instant faceted Meilisearch engine, passwordless Discord OAuth2, AI generation tools, growth analytics (Server Hub) and Stripe credit-based monetization. Bilingual FR/EN.

Stack: Nuxt 3, Vue 3, TypeScript, Tailwind, Meilisearch, PostgreSQL, OAuth2, Stripe

Productivity Hub

In production

All-in-one productivity & health app on **three platforms** (web, desktop, native Android via Capacitor). Habit tracking, tasks, weightlifting, customizable data tracking with 3D visualizations, an AI coach built on the user's real data, gamification and a Stripe freemium model. Self-hosted on VPS with multi-stage Docker and GitHub Actions CI/CD; autonomous SEO content pipeline (ChatGPT + Gemini + Search Console loop).

Stack: Next.js, React 19, Supabase, Zustand, Three.js / R3F, Capacitor, Docker, Stripe, OpenAI

TECHNICAL SKILLS

LANGUAGES TypeScript, JavaScript, Python, Java, C, C++, R, SQL

FRONTEND Next.js, Nuxt 3, React 19, Vue 3, Tailwind CSS, Radix UI, Framer Motion, Zustand, Three.js / React Three Fiber

BACKEND Node.js, PostgreSQL, Prisma, Supabase, Meilisearch, REST APIs, OAuth2, Stripe

GROWTH / SEO Programmatic SEO, competitor scraping & data structuring, Google Search Console, JSON-LD schema, acquisition

MOBILE Capacitor (native Android builds from web)

DEVOPS & ML Git, Docker (multi-stage), GitHub Actions, Linux, self-hosted VPS, Vercel, LLM API integration, PyTorch / MediaPipe (computer vision)

EDUCATION

42 Paris

Ongoing **BSc Computer Science**

2024 – 2026

Admitted after "La Piscine"

Rennes, France

- One of the world's most selective, merit-only coding schools. Project-based, peer-evaluated learning.
- Low-level systems in C/C++, algorithms, networking. RNCP level 6 & 7 state-certified titles.
- Two years completed. Algorithms, data structures, OOP (Java), Python, web development.
- Databases, functional programming (Haskell), applied statistics & data science (R).

LANGUAGES

Russian — native · **French** — bilingual (in France since age 3) · **English** — fluent (C1/C2)
